

That's The Solar System!!!

(To the tune of "Yankee Doodle")

The sun's a star with energy,
A giant burning mass.
If we lived on it at all,
We'd all be burned to gas.

Then there's planets, oh what fun!
Eight make up them all.
Inner and out what a run!
The orbit's quite a long one.

Asteroids and also comets
Meteors in forms too
Moons that go around and 'round
It makes me dizzy, how bout you?

Gravity is very strong,
Inertia helps some too.
Together they pull things along,
And that's the Solar System!!!
